SUBJECT: Imminent Hazard Site

FROM: Bruce R. Adler, Attorney
General Enforcement BranchTO: John Frisco, Chief
Hazardous Waste Site Investigation Unit

Attached to this memo is a report I received from Coles Phinzy regarding Borne Chemical in Elizabeth, New Jersey. As you can see from the contents of the package, an SPCC inspection was conducted at the site which has yielded information that this might be a potential imminent hazard case. I have already spoken with John Czapor on this matter, who has expressed an interest in pursuing the investigation with a representative from the FIT team. Indications are that this might be a "good case," so I would like to see it receive a fairly high priority. Please note that I have not retained a copy of the file, so it should be handled carefully.
